Pygame June Jam 2026

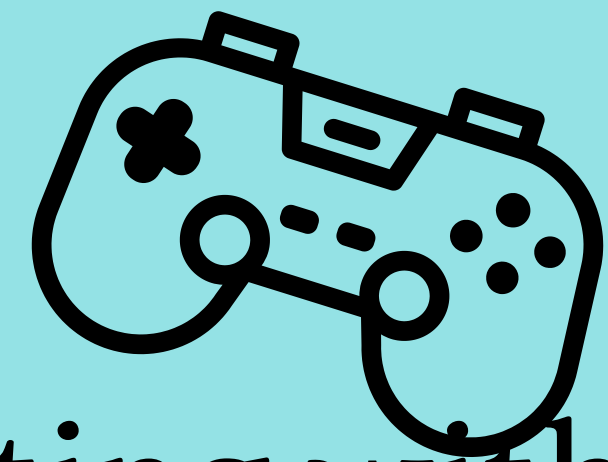

Presented by Averine, Yu Zhen, Si Qi and Sreeja :)

Contents:

- 1) Game and Art concept
- 2) Introduction to game
- 3) Aim of the game
- 4) Game features/mechanics
- 5) Why our game would be fun
- 6) Design choices and implementation
- 7) Future updates
- 8) Credits :D

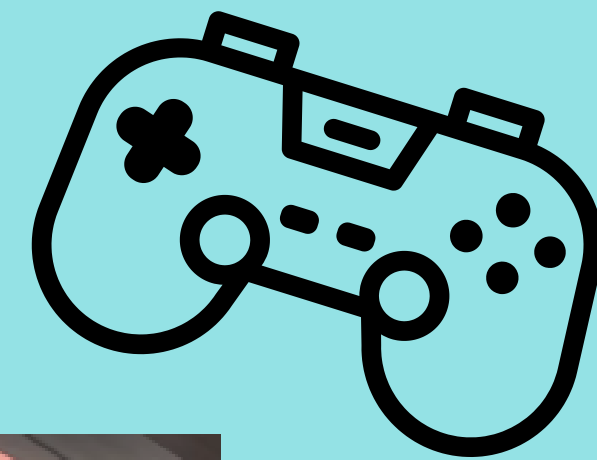

Game concept:

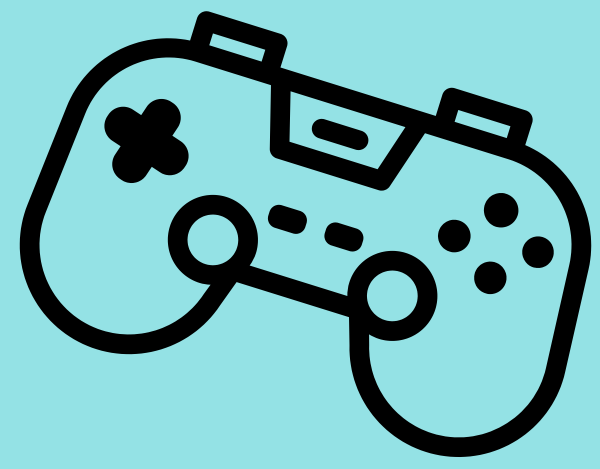

In our game, a player will go around interacting with everyday objects. Some objects may be monsters in disguise. If the player interacts with a monster in disguise, they will enter a minigame where they fight to defeat the monster. Once the monster is defeated, it'll be added to a collection list. Players unlock more rooms by defeating more monsters.

Art concept:

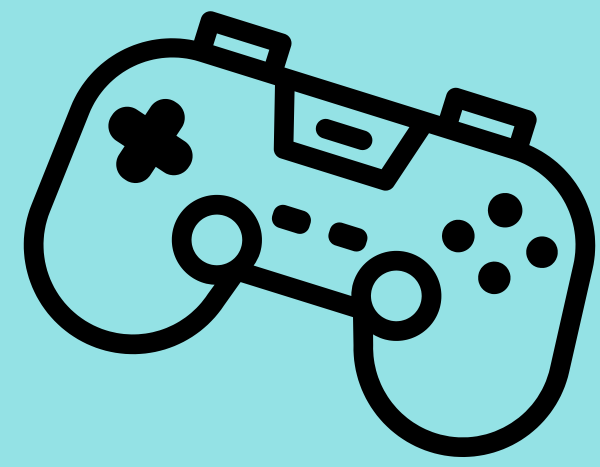

Introduction to game:

Live demo!!

Aim of the game:

The aim of the game is to collect all the different types of monsters and escape the mimic-infested house.

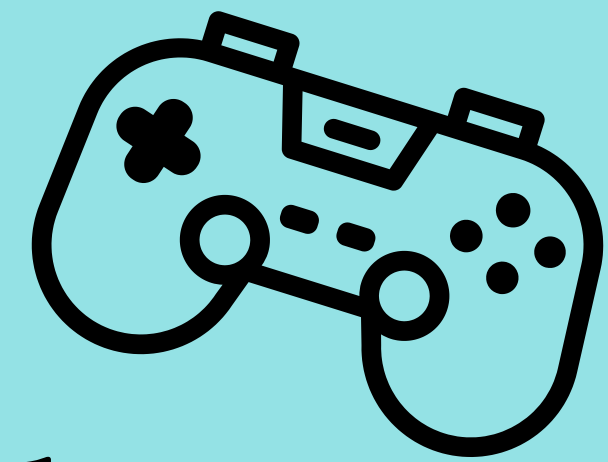

Game features/mechanics:

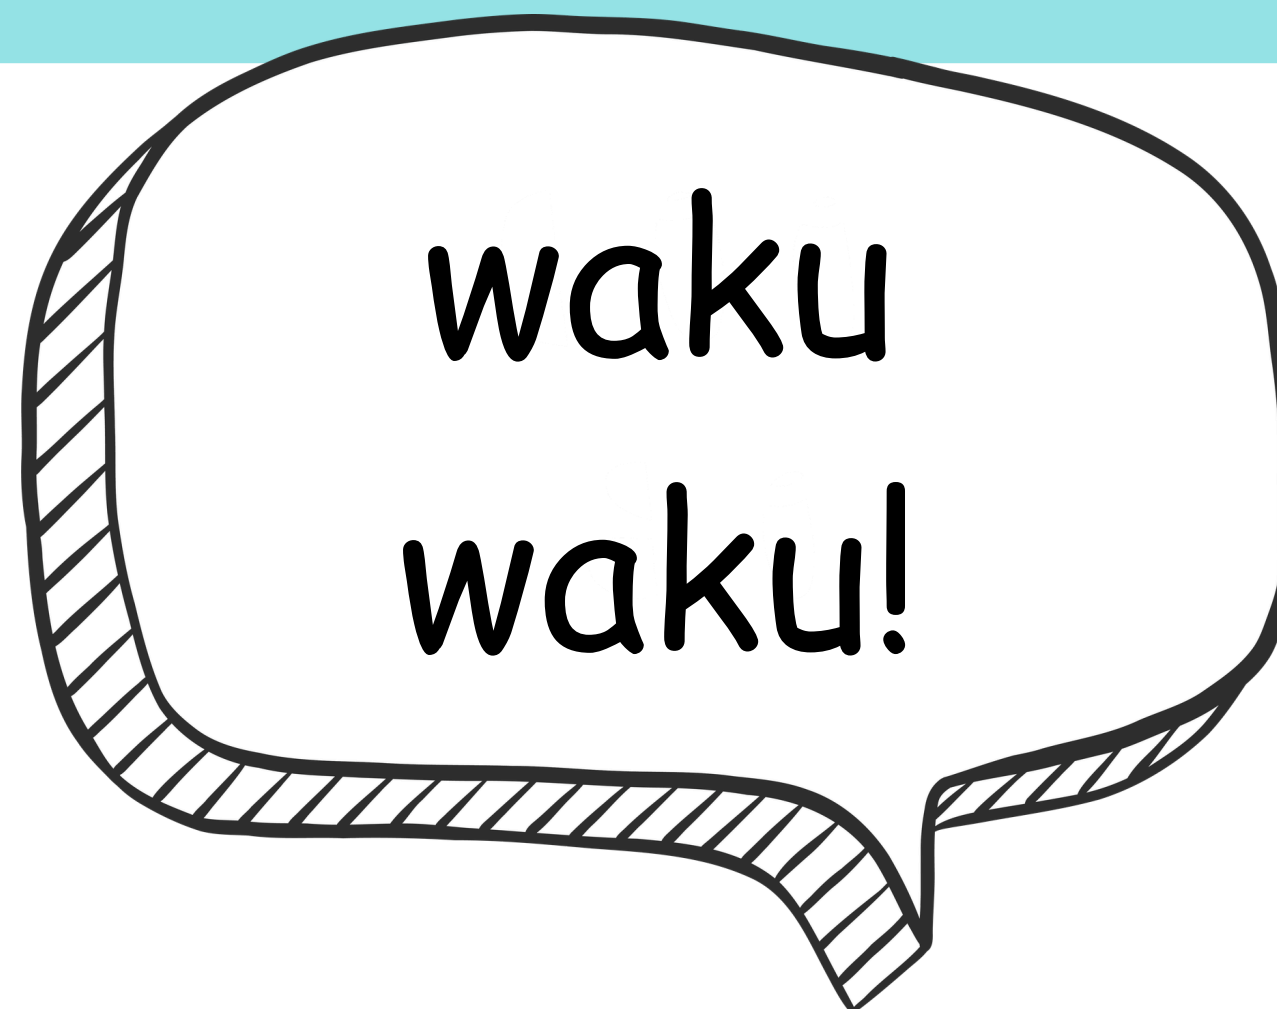

This is essentially our storyline: A girl wakes up one day and her house is infested with mimics. When the player gets close to an object, they will click on the enter button to determine whether the object is a monster. If it is, then the player will click on the space button 3 times to defeat the monster. (simplified due to time constraints)

Why our game would be fun:

Our game keeps players guessing--whether the object is a monster or not will only be revealed the moment they interact with it, making it exciting!

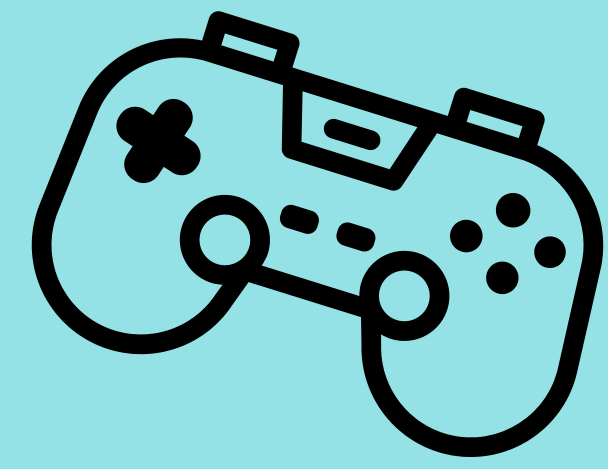

Design choices and implementation:
We decided to go for a sort of cosy vibe to make the players feel less stressed while playing our game.

Typically, mimics aren't particularly threatening but can be surprising to encounter. When designing the main character, the goal was to get across the idea this is an ordinary girl thrown into an unfortunate situation, still in her sleeping clothes and with messy hair.

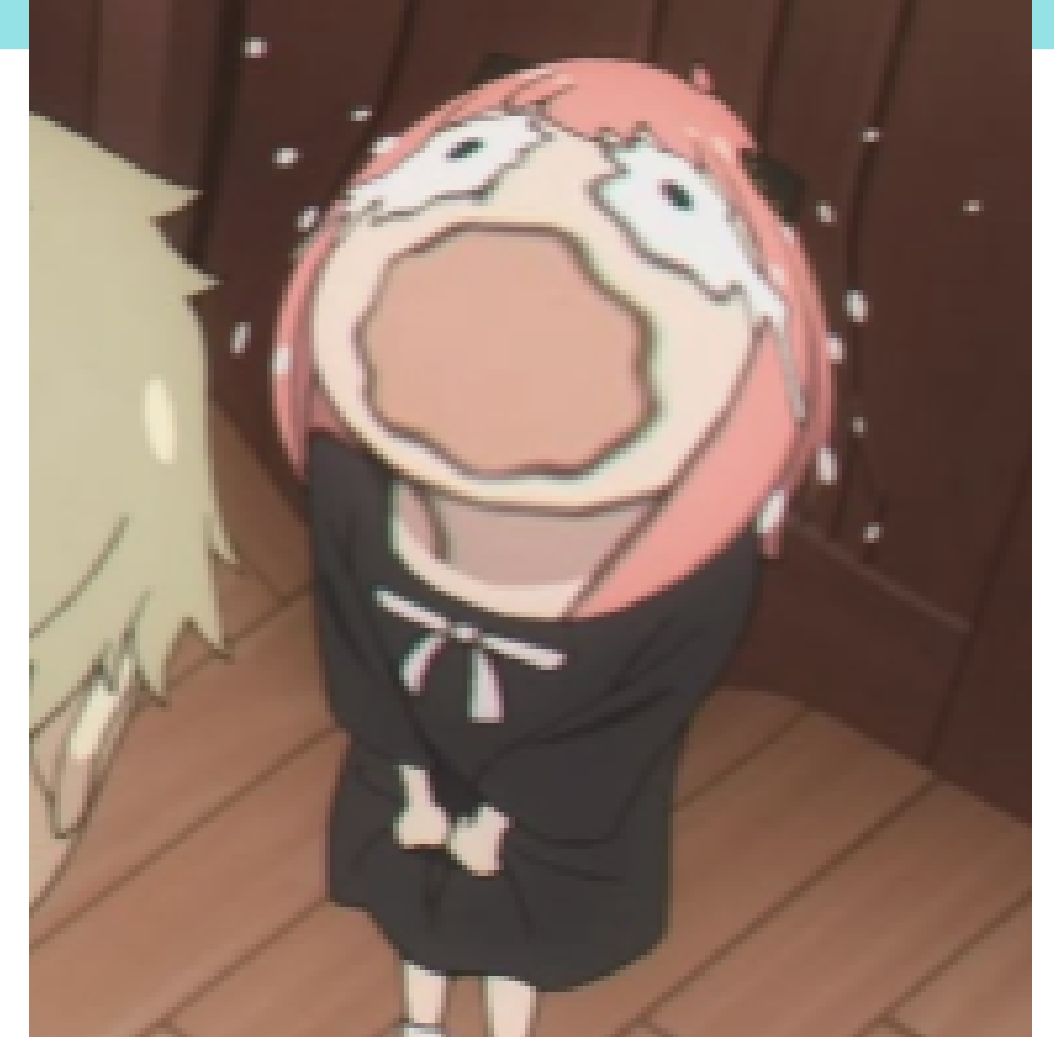

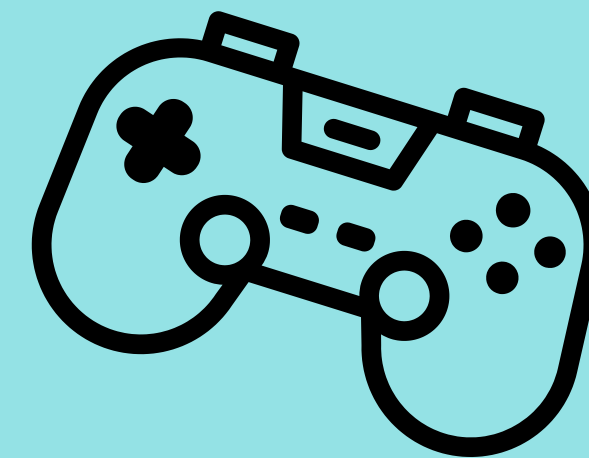

(like Anya
here)

Future updates:

We currently do not have anything planned for future updates, but maybe one day we'll continue this project :)

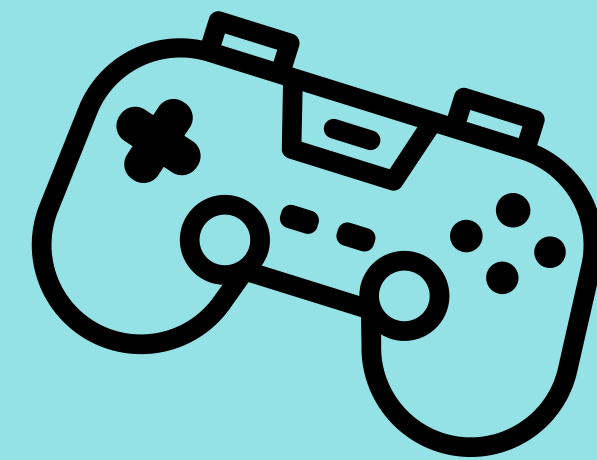

Thank you for listening!

Credits!!

Main idea: Averine

Main code: Yu Zhen and Sreeja

Touch-up of code: Sreeja and Si Qi

Game music (while exploring): Averine and Si Qi

Design: Yu Zhen

Slides: Averine and Sreeja

Write-up: Sreeja

Slides presentation: All of us :D
