

Game Jam Game Presentation

11

June

2026

Team Members

- Tanmay Sharma (SST)
- Kavin Sakthivel (SST)
- Putra Rayyan (SST)
- Caleb Ling (SST)

Write Up

- A write up of minimum 100 words.
 - How you came up with the idea
 - What challenges you faced
 - How you overcame them.

Write Up

When we first came together as a team, we were enthusiastic to work together on our game. Firstly, we attended the sessions on Python Basics and Pygame. Some of us even decided to go for the side quests to better enhance our game development. On Wednesday, we decided to start our game and enter basic variables. After that, we gave each other our roles. Kevin did the coding, Rayyan did the error fixing, Tanmay did the slides, and Caleb did the music. Since Kevin was resilient and managed to finish all the code, we were all motivated to do just the same. Everybody committed their best effort to this project, and we all hope to win a prize for this competition. Since Kevin managed all his time well and dedicated himself to the coding, we decided to name the game "Kevin's Quest."

One of the biggest challenges we faced was debugging the code and ensuring that all the game features worked correctly. Sometimes, errors appeared unexpectedly, which took time and patience to fix. We also faced challenges managing our time and coordinating our different tasks, especially when adding new features to the game. However, by communicating with each other, staying focused on our roles, and helping one another when needed, we were able to overcome these difficulties and continue making progress on the project.

As a team, we hope to win a prize from this annual workshop and are proud of what we have achieved together.

Game Concept / Game Intro

Kavin's Quest is a 2D fantasy role-playing game (RPG) developed using Python and Pygame. In this adventure-filled game, players take on the role of a hero who must explore a vast world, complete quests, battle enemies, and defeat powerful bosses to save the kingdom.

Players can move, jump, double jump, and attack while exploring different regions such as forests, caves, dungeons, towns, and castles. Along the way, they can collect loot, level up their character, upgrade their abilities, and discover hidden secrets.

The game features a variety of quests, enemies, boss fights, and rewards that keep players engaged throughout their journey. With its fantasy setting, progression system, and action-packed gameplay, **Kavin's Quest** aims to provide an exciting and challenging experience while also helping players improve their keyboard control, coordination, and strategic thinking skills.

The project was created as a team effort during the workshop, combining coding, debugging, presentation design, and music to create a fun and immersive gaming experience.

Target Audience / Aim of the Game

Target Audience

This game is designed for:

- **Teenagers and young adults (ages 12–18+)** who enjoy fantasy adventure games.
- Players who like **Dungeons & Dragons**, RPGs, dungeon crawlers, and turn-based combat.
- Beginners learning Python who want to explore a large game project.
- Casual and hardcore RPG players who enjoy quests, exploration, loot collection, character progression, and boss battles.

Aim of the Game

The aim of the game is to:

- Create an immersive fantasy RPG experience inspired by classic tabletop adventures.
- Allow players to create unique characters and choose different classes and playstyles.
- Encourage exploration through a world filled with forests and hidden treasures.
- Challenge players with strategic turn-based combat against enemies and powerful bosses.
- Reward progression through leveling, better equipment and rare loot.
- Provide long-term gameplay through quests, side missions, crafting, trading, factions, reputation systems, and world events.
- Encourage decision-making by allowing players to choose quests, manage resources, trade items, and customize their character build.
- Create a game that is expandable, allowing future additions such as new regions, classes, enemies, bosses, items, storylines, multiplayer features, and events.

Game Features and Mechanics

Some of the game Features and mechanics are:

1. Character System
2. Movement and Controls
3. Combat System
4. Quest System
5. Inventory and Loot
6. Trading and Shops
7. Crafting and Upgrading
8. Save and Progression System
9. Educational Benefits

Design Choices

Here are our design choices we used:

1. Art Style
2. User Interface (UI)
3. Combat Design
4. World Design
5. Quest Design
6. Progression System
7. Sound Design
8. Accessibility and Learning
9. Expandability

How to download the game

1. **Open the pygame folder (the most recent one not the other one)**
2. **Double click both files and import them into a VS Code empty text and press run.**
3. **The game should play.**
