Game Concept

A roguelike action game
where everyday
household objects come
alive with violent intent,
forcing the player to
survive and fight
through a corrupted
“home” using only a
pencil and stackable
buffs.

yay

[Back to Home Page](#)

Introduction to Game

- The game takes place inside a controlled science environment disguised as a normal house
- Everyday objects (bed, towel, furniture, etc.) are alive with hostile “souls”
- The environment transforms the mundane into something dangerous and unpredictable
- Player must explore and clear the house room by room

Target Audience

Fans of roguelike /
action survival
games

(those who like Risk of Rain!)

Casual players
interested in unique
story concepts and
creativity

Players who enjoy
fast-paced combat
and progression
systems

[Back to Agenda Page](#)

Aim of the Game

Survive and clear all
hostile rooms in the
house

Defeat corrupted
everyday objects

Progress by
collecting buffs and
improving combat
abilities

Game Features/ Mechanics

jett revive me

Core Combat	Enemy System	Buff System	Roguelike Progression	Room-based Exploration
Fast, simple combat focused on positioning and timing	Everyday items (pencil, fish) become hostile enemies	Players collect buffs that permanently stack during a run	Each run features randomized buffs and enemy placements	House is divided into rooms that must be cleared to progress
parry (WIP)	mouse chasing you - increases exponentially	Buffs modify damage, speed, or special abilities	Procedural generation	Each room introduces new enemies or challenges
Basic but flexible tool that works with all buff types	Encourages players to adapt to different enemy behaviors	Different combinations create varied playstyles each run	different stages and different maps	Creates a structured but exploratory gameplay flow
cursor follower movement	Boss System		Encourages replayability and experimentation	
Death / revive effect				

Why This Is Fun / Unique

Humor + horror mix (a towel or bed trying to kill you)

Turns everyday objects into unexpected enemies (new perspective on the mundane)

Replayability through roguelike buffs and randomness

Encourages curiosity: "what if normal life objects were alive?"

Simple weapon vs chaotic environment = creative combat tension

Have u ever wondered?

Design Choices & Technical Implementation

Challenges Faced

the only challenge is staying awake
#burnthemidnightoil

A for apples that boosted my hp

and A for effort when
Unity was unfamiliar

Balancing ideas vs
what was realistically
buildable

B for blur

C for crying while rushing code

Constraining time with
large initial scope

Debugging debugging
debugging

D for drumroll

How We Overcame Challenges

YouTube tutorials + facilitator guidance

Debugging using error logs and programming fundamentals

Focused on core gameplay loop first

Reduced scope: mechanics > UI/art polish

Task planning to prioritise essential systems

moral support from each other

Future Developments

More enemy types
(different household
objects with unique AI)

More buff
combinations and
synergies

Better UI and
dialogue system
polish

More rooms /
procedural
generation

Boss fight (e.g. "The
Core Experiment")

Improved art style
and visual effects

could be done by end of June - riyaz

Thank you!

we love buildingblocs
