8-12 June @ NTU

June Jam

Table of contents

- 
- Context
 - Initial Vision
 - Intro to game
 - List of features
 - Future Developments

Context

- I study infocomm security at NYP.
- Cybersecurity is a difficult field to make fun, but you can make the process more intuitive.
- First game jam and first unity project, initial scope has to be minimal but scalable

Initial Vision

Similar to this game!
But you're the good
guy

- A puzzle game aiming to teach cybersecurity concepts through non-intrusive means by weaving in concepts with gameplay.
- Idea 1 was to make a hacking simulator where the player assumes the role of an ethical pentester
- Scrapped the idea in interest of time and familiarity of the engine

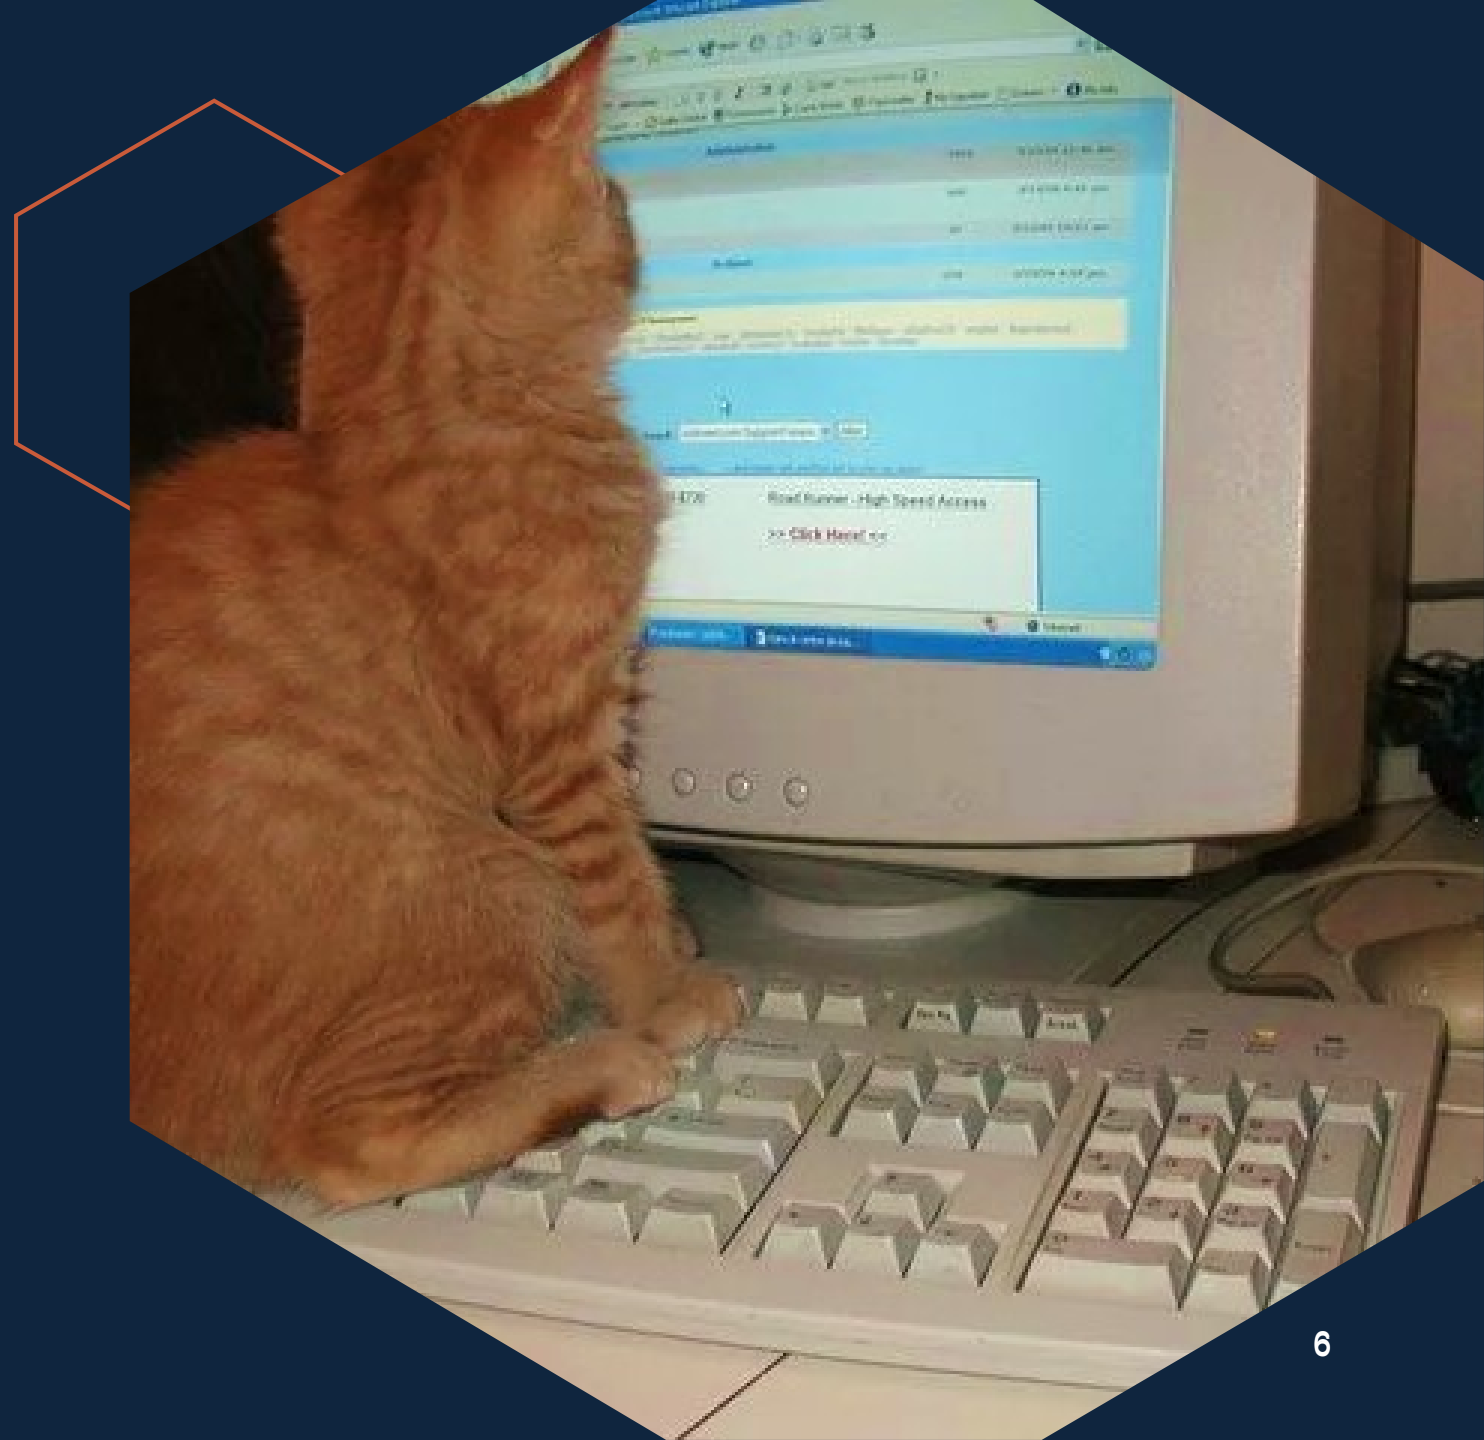

Intro to system fault

- You're stuck in a room and need to get out.
- Collect information and find clues around the room to find out what your next steps are and what you need to proceed (passwords, codes, anything!)
- Currently has 3 puzzles. All of them are subtly themed around cybersecurity things.

(Couldn't come up with a better name TT)

List of features

- Modular Camera system which tracks player within bounds, new ones can be added easily and will track the player all the same
- Modular Puzzle system, allowing puzzles to be easily added and programmed within the same script.
- Simple dialogue system, which doesn't use switch case. Has flags for interactable objects.
- Simple Visual feedback, Interactable objects will have a subtle glow when approached
- 3 puzzles that are not that hard

Future Developments

If given go ahead, will change engine to something I'm more comfortable with.

I wanted to make a robot section inspired by this game

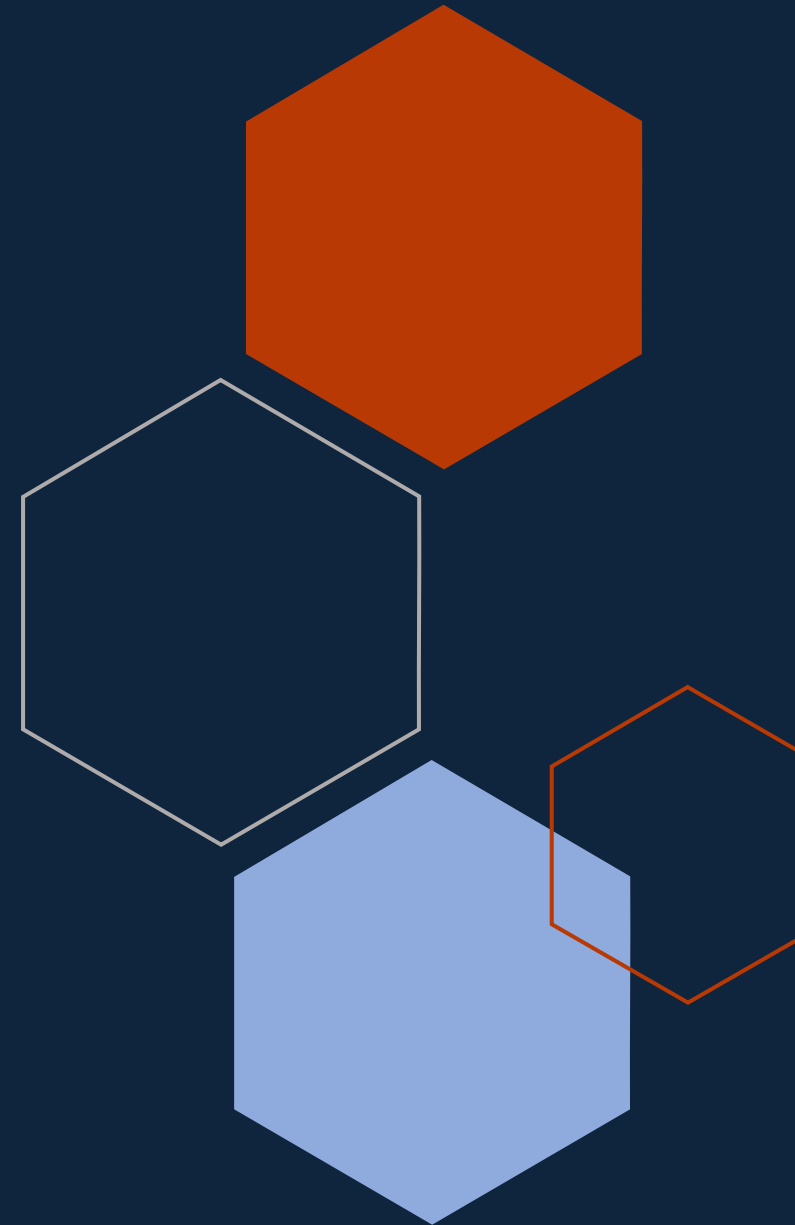

To teach simple python

Will explore my initial concept once I am more confident!

If I had to update the existing game, I'd replace the in game assets (the character, the rooms) with better art. Then I'd try to make new and more unique UI Based puzzles.

SQLi was one I really wanted to add since its very popular

A decorative pattern of hexagons in various shades of blue, orange, and white, arranged in a honeycomb-like structure on the left side of the slide.

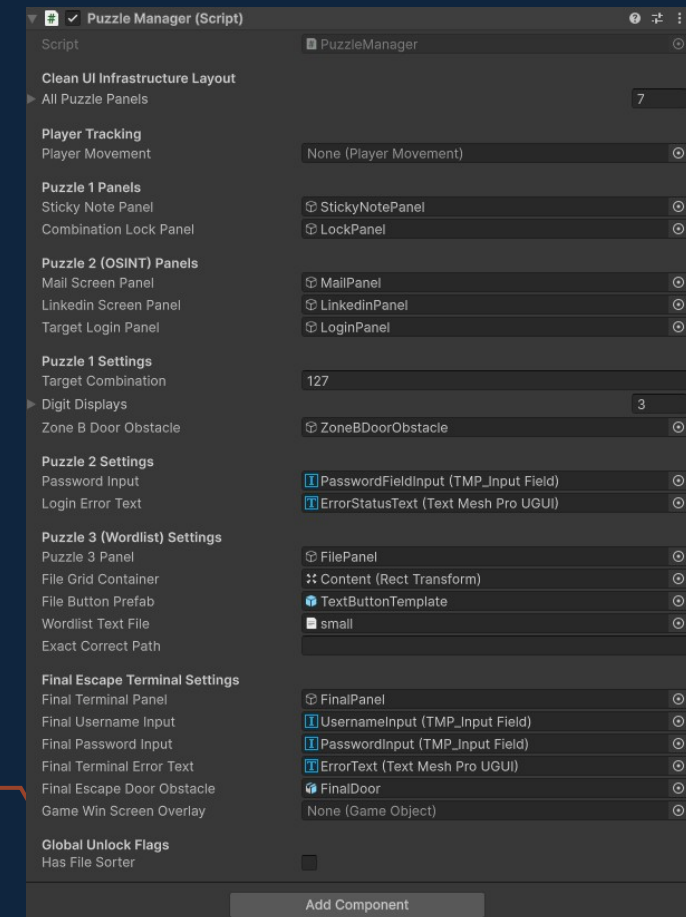

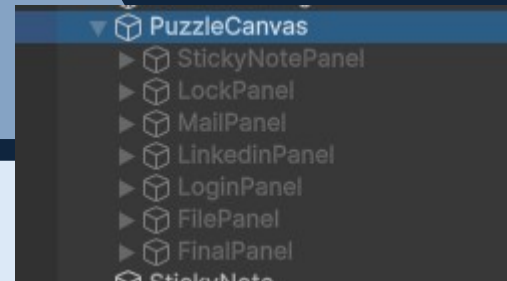

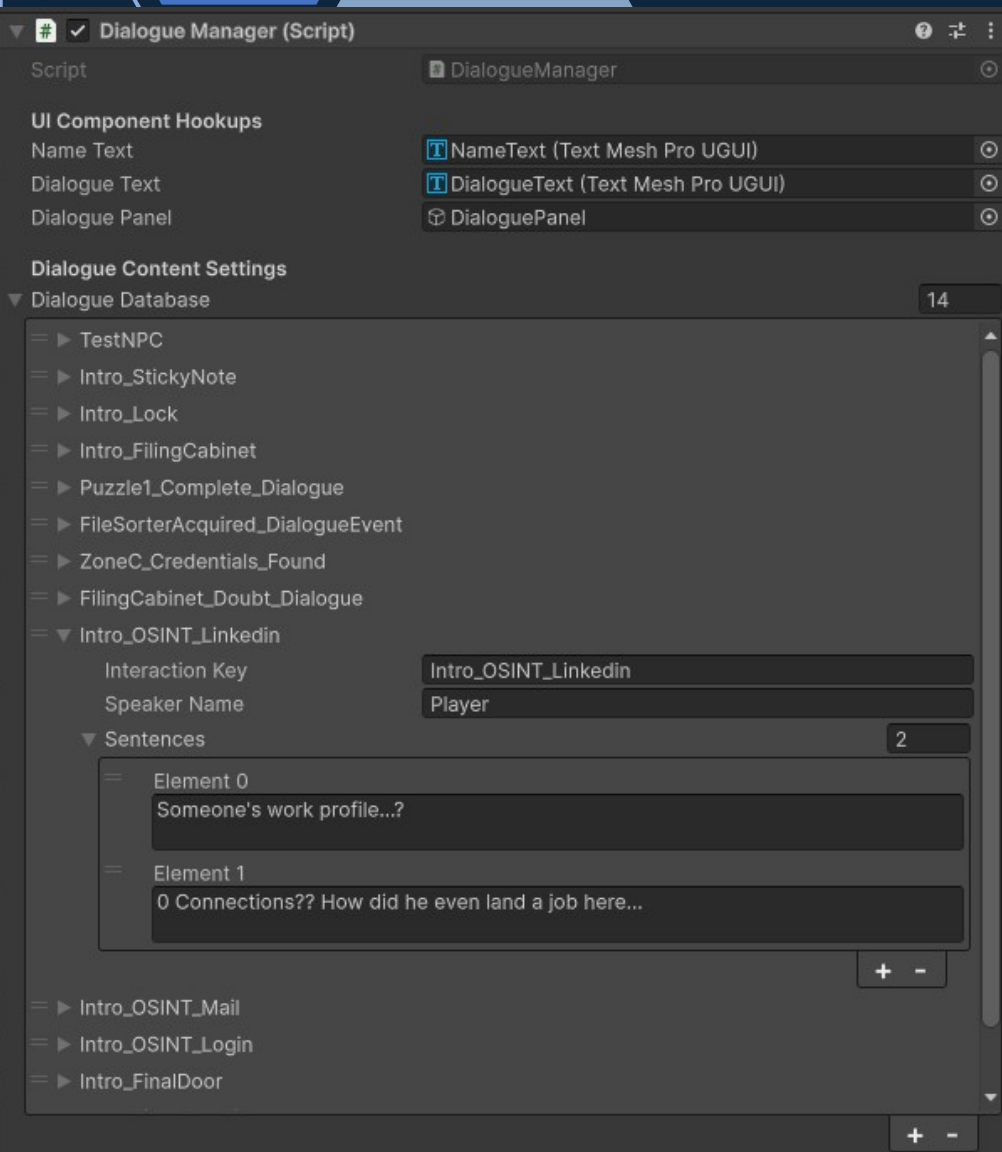

Thank you
