

The Great Sink Escape

Game by Group U3:
Aaron, Atharv, Kavin and Starz

Game Concept

The Great Sink Escape is a 3D platformer where players control a slippery bar of soap climbing a tower of dishes while escaping rising water.

- Set inside a giant kitchen sink
- Player controls a bar of soap
- Water rises continuously from below
- Reach the soap dish at the top to win

Introduction to The Great Sink Escape

Intro to The Great Sink Escape: Target Audience / Aim

- Target Audience:
 - Casual Gamers
 - Students and teenagers
 - People who view watching dishes as a chore
- Aim:
 - Create a short but replayable experience
 - Trying to make dishwashing seem slightly more fun

Intro to The Great Sink Escape: Game Features

- **Movement**

- WASD movement
- Spacebar to jump

- **Platforming**

- Plate platforms
- Bridge sections
- Vertical climbing path

- **Hazards**

- Rising water

- **Scoring**

- Score based on highest height reached

Intro to The Great Sink Escape: Fun and Useful!

- Creates tension through rising water
- Easy to learn but challenging to master
- Physics-based movement makes gameplay unique
- Encourages players to improve their score

Live Demonstration!

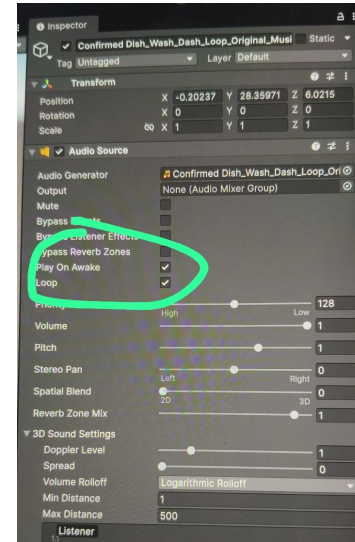

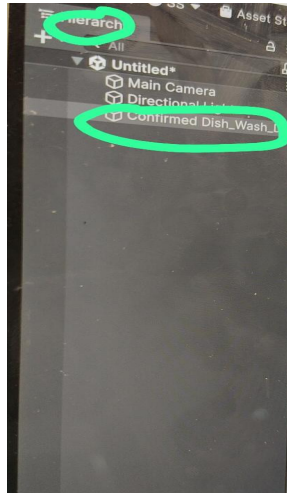

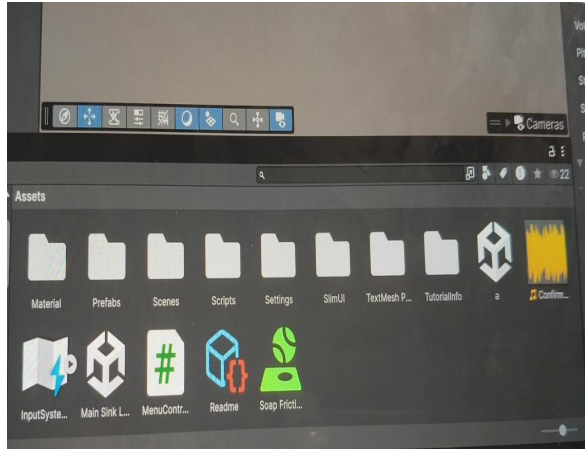

Design choices and Technical Implementation

Design Choices - Elevating User Experience through Music

- Aim: Achieve a sense of authenticity from our own dishwashing experience
- Original Composition of *Dish Wash Dash* by © *Starz Seng 2026* on Bandlab (DAW)
- Music Compositional Features:
 - Driving momentum to increase adrenaline and enjoyment (compliment the rising water level time limit)
 - Drums (Scrubbing): Pulsation of 4 beats per bar with duple subdivision as per motion
 - Bass: Motor rhythm
 - Bright Synthesizer Lead: Joyful experience and ideas of Squeaky Cleanliness
 - Loopable music:
 - Player will not have an abrupt stop
 - Keeps game momentum going
 - Encourages continual try
 - Other than looping main theme: (Composed but due to limited time factor, not added into project, though the music is completed)
 - Game Over jingle
 - Victory jingle

Technical Implementation - Inputting Music into Unity (WORK IN PROGRESS)

- Steps to input Main Loop of *Dish Wash Dash* © Starz Seng 2026 into Unity:
 - a. Drag + drop .wav file into Assets, which makes it an “Imported Object”
 - b. Check the Inspector Window on the screen
 - c. Drag and drop .WAV file to SampleScene
 - d. Enable Looping and the Play on Awake button

Design choices + Technical Implementation

- Design choices
 - a. Soap fits the sink theme
 - b. Plate platforms create visual consistency
 - c. Spiral layout naturally guides players upwards
- Technical Implementation
 - a. Unity Engine
 - b. C# Scripts
 - c. Rigidbody Physics
 - d. Trigger Colliders
 - e. Audio mixer
 - f. UI System

Future Developments :)

Future Developments

- More levels
- Endless mode, with the water gradually speeding up
- Moving platforms
- Collectibles(stat boosts, other helpful items)
- Leaderboard system
- Improved graphics and effects

Challenges

Challenges

Challenge 1

- Team collaboration without sharing a Unity project

Solution

- Clear communication and role division

Challenge 2

- Building a balanced spiral level

Solution

- Repeated testing and adjustment of platform positions

Challenge 3

- Lack of time due to project handover as the Unity project couldn't be shared

Solution

- Making do and being flexible and adaptable
